What I Bring

I build useful systems from undefined requirements: clarify the decision, find the data, test the model, ship the product surface, and keep the infrastructure understandable. My strongest work sits between software engineering, analytics, and technical leadership.

Professional Work

Falabella **Planning and Development Engineer**

May 2026 – Present

- Turn messy historical BigQuery data into metrics and assumptions that support store allocation and replenishment decisions.
- Use Python, pandas, and polars to explore nonlinear behavior, patch inconsistent data, and compare model behavior under different filters.
- Communicate analytical findings as concrete recommendations for future operating policy.

Buda.com **Automation and AI Intern**

Aug 2025 – Dec 2025

- Shipped an internal AI chatbot with complex API integrations, advanced RAG, Contextual Chunking, HyDE, and context engineering.
- Improved retrieval quality with Contextual Embedding and MultiVector Indexing, reaching above 95% answer accuracy.
- Built n8n automation pipelines for critical business processes with reliability and maintenance in mind.

Nikola Chile **Full-Stack Developer**

Mar 2025 – Aug 2025

- Owned the Next.js and Django architecture behind nikola.cl, from frontend implementation to backend and deployment decisions.
- Led modernization from legacy systems to scalable web infrastructure, including code-quality automation and monitoring tools.
- Received recognition for leadership and delivery on the current company website.

Preuniversitario PreUng UC **Teacher**

1 year

Proyecto Going UC **Teacher**

1 year

Debates Constitucionales **Head Teaching Assistant**

2 years

Projects

- **Bea's Corner** – Marketplace data product for makeup availability and prices across Chilean retailers.
- **BCI Beneficios** – Faster BCI+ discounts experience with filters, categories, minimums, and caps.
- **Mi Carrito** – E-commerce price comparison using automated supermarket scrapers.
